Have you been in contact yet with Christie Wilcox?

<http://www.christiewilcox.com/>

She is a science writer/blogger and an evolutionary biologist, finishing up her PhD at the University of Hawaii.

She is an award winning blogger, and hosts a blog on Discover—<http://blogs.discovermagazine.com/science-sushi/#.UeWndlOv-uM--that> is very well thought of.

She is brilliant, funny smart, engaging, progressive and very committed to science--and is therefore very supportive of crop biotechnology. I'm certain she would love to be 'dragged' into this debate.

I am not a personal friend of hers. We've engaged here and there online, and I am an admirer of her work. A very good friend of mine, Keith Kloor (whose name I'm sure you know) is a fellow Discover blogger, and could broker a meeting, but frankly, I would just send her a note, say that Jon Entine from GLP and others suggested that you contact her and ask if she's aware of the issue and might be interested in 'talking science' around Hawaii on this.

I am also happy to contact her on your behalf...just let me know.

Her email is: [nerdychristie@gmail.com](mailto:nerdychristie@gmail.com)

I think she might be a GREAT ally on this.

Jon Entine
